Building On Your AIX Investment: Moving Forward With IBM EServer PSeries In An On Demand World (MaxFacts Guidebook Series)

Synopsis

For anyone who uses IBM eServer pSeries, RS/6000 servers, or other UNIX servers, this book will help assess their own businesses or institutions to evaluate current states of e-business adoption. Where IBM is headed in terms of the future of e-business is shown, and how to take full advantage of their on demand strategy in organizations is also addressed. Guidance on how to leverage an existing investment in AIX and UNIX computing infrastructure in the future is provided. A case study of the experiences of Toyota Australia as they move down the e-business on demand adoption path is also included.

Customer Reviews

At one time the information in this book was relevant. The book itself is well organized and for its day insightful. Based on the p-4 which is a tad outdated as we are now (as of this review) at the p-7. Much of the new operating system design and even hardware is no longer relevant. The flexibility that you have now days was not imagined at the time of this book. Hopefully there is a more up to date equivalent. I have not tried to contact the author yet.
